CPR Facts in the Philippines

- Heart Disease top cause of Sudden Cardiac Arrest (SCA)
- More than 70 to 80% of SCA occur out of Hospital and did not receive CPR
- 10-16% of Out of Hospital Cardiac Arrest(OHCA) given Bystander CPR
- > 50% OHCA not attended by EMS
- Very small % of Filipinos knows CPR and AED
- No Public AED program yet

Reflections on the DRRM Program

Disaster Risk Reduction is Everybody's Responsibility

“Through NSTP, we learned that disaster preparedness during calamities and lowering of disaster risk is everyone's responsibility. As we go along the course, we have established friendship with the community where we shared lessons in DRRM; we learned from their stories, we were inspired to help, act, and be sensitive to their plight and we were able to empower a community to promote action to their problems. “

Reflections on the DRRM Program

NSTP is about solidarity to the poor

“NSTP is not about giving money or food to the poor because you feel sorry for them. It is not about helping them in order to look good or get self-satisfaction from it. It is about understanding their situation and hearing their voices which are left unheard. It is about being with the people, learning to cry with them and crying with them, to think with them, to feel the struggle with them and to do with them.”
